

Bitrix24 Drive Setup — Per Project Checklist

Follow this for every project so the backend can reliably find and send the right files. Consistency in naming matters most — the automation resolves folders by matching the **Project name/identifier exactly**, not by guessing.

1. Folder Structure

Create one top-level folder per project, with fixed subfolder names inside:

```
/Projects/  
  /Grand Orchard/  
    /Brochure/  
    /Video/  
    /Images/  
    Cover.jpg    ← optional, see Section 3
```

- The **top-level folder name must exactly match** the Project name as it appears in your Project SPA/list in Bitrix24 (same spelling, spacing, capitalization). This is how the backend maps a selected Project to its Drive folder.
- Subfolder names (`/Brochure/`, `/Video/`, `/Images/`) should stay identical across every project — the backend looks for these exact folder names to know what type of file it's grouping.
- There's no dedicated `/PDF/` subfolder — the brochure **is** the PDF, so it lives in `/Brochure/`.

2. What Goes Where

Subfolder	What to put in it	How many files
<code>/Brochure/</code>	The project brochure, as a PDF	One file. If multiple versions exist, keep only the current/final one here — extras can live outside this folder or in an "Archive" subfolder so they don't get picked up
<code>/Video/</code>	Project walkthrough or promo video (.mp4)	One file, same as above
<code>/Images/</code>	Renders, floor plans, gallery shots (.jpg/.png)	Multiple files allowed — each one will show as a separate checkbox option to the executive

If a project doesn't have a video yet, just leave `/Video/` empty (or don't create it) — the app simply won't show that option for that project, no error.

3. Cover Image (Optional, for the `contact_now` message)

- If you want a **project-specific cover image** on the initial `contact_now` message (instead of the default brand skyline cover), add a single image file directly inside the project's top-level folder, named exactly:

Cover.jpg

(or `Cover.png` — just one, not both)

- If no `Cover.jpg` exists for a project, the system automatically falls back to the fixed brand cover image — so this step is entirely optional per project.

4. File Naming (inside each subfolder)

- Keep actual filenames clean and descriptive — they don't need to match anything programmatically (the backend picks up *whatever* file is inside the correct subfolder), but clean names help your team when browsing Drive manually.
- Example: `Grand-Orchard-Brochure-2026.pdf` rather than `Untitled(3).pdf`.
- Avoid special characters (`#`, `%`, `&`, `?`) in filenames — these can cause issues when the file is turned into a shareable link.

5. Sharing / Link Settings

For each file that should be sendable (brochure, video, every image, and the cover if used):

1. Right-click the file in Bitrix24 Drive → **Get external link** (or "Share").
2. Set the link permission to **view-only** (not edit).
3. **Do not set an expiry** on the link, or if Bitrix24 requires one, set it to the longest available option — an expired link will cause that send to fail silently until refreshed.
4. Leave the file itself in place afterward — don't move or rename it later without regenerating the link, since the backend will cache/reuse these links.

6. One-Time Setup vs. Per-Project Repeat

Do once	Do per project
Default brand cover image (upload somewhere accessible, note its link for the backend's fallback default)	Create the <code>/Projects/ProjectName/</code> folder
—	Create <code>/Brochure/</code> , <code>/Video/</code> , <code>/Images/</code> subfolders
—	Upload the relevant files into each
—	Generate external/view-only links for each file
—	(Optional) Add <code>Cover.jpg</code> if a custom cover is wanted

Quick Checklist (copy this per new project)

- ☐ Folder created: `/Projects/<Exact Project Name>/`
- ☐ `/Brochure/` — PDF uploaded, external link generated
- ☐ `/Video/` — MP4 uploaded (if available), external link generated
- ☐ `/Images/` — all relevant images uploaded, external links generated for each
- ☐ `Cover.jpg` added at project root (optional)
- ☐ Project name in Drive matches Project name in Bitrix24 CRM **exactly**
